IPTV from Netvue at Fitzdares

IPTV is the convergence of television distribution with IT data network infrastructure. IPTV has rapidly become the industry standard for TV and audio-visual distribution around buildings.

Fitzdares bought an IPTV system from Netvue in 2009 to distribute live broadcast TV around their new offices in central London. The IPTV head-end encodes broadcast television signals from aerial and satellite dishes as well as private video feeds to create IPTV channels for viewing on TV display screens and computer desktops throughout the business.

Netvue IPTV Systems can also include Video on Demand servers, for time-shifting and archive of television and video media content, and further enhancement can be provided using Digital Signage technology, for dynamic communications with staff and visitors.

Netvue are proud to offer a professional service to all our clients, new and old. We have the skills and experience to specify, design and install the right IPTV system for your company.

Benefits of IPTV

- IPTV uses the existing computer network - no new cables, no hassle!
- Digital picture quality - immune from noise, distortion and signal loss
- Remote IPTV system management using a web browser
- Unlimited channels with controlled user access
- TV available from any network point throughout the business
- Television delivered direct to PC and Mac desktops on the IT network
- Supports: HD (high definition); auto 16:9 and 4:3 aspect ratio switching
- Easy future additions and expansion
- Flexible scalable systems – small systems can be grown into larger ones
- Integration with VOD, Digital Signage and AV systems.
