

Press release: Netvue IPTV at Envy

Business IPTV specialist Netvue has installed a complete business IPTV system for ENVY, the new high definition post-production facility in central London, UK.

The system at ENVY uses Exterity equipment to provide television distribution of Freeview channels, satellite channels and DVD, as well as a feed from their video matrix, all distributed over IP on the company ethernet network.

The channels are displayed on large display panels in the reception and client areas, LCD televisions in the edit suites, and on PC desktops across the company.
