

## Press release:

# Netvue offers IPTV player for Macs

Netvue, the business IPTV specialist, has produced a version of its 'Channel Selector' application for use on Macintosh computers. This IPTV player software allows simple single-click channel selection when used as part of a Netvue IPTV system.

"The addition of the Macintosh version of our Channel Selector application makes Netvue's IPTV systems the ideal solution for the networked home, where Macs are much-loved", commented Jonathan Rackowe, Managing Director at Netvue. "Netvue's IPTV systems can now offer the same user interface to both PC and Mac users, which is especially valuable in mixed computing environments".

Netvue can be visited at [www.netvue.co.uk](http://www.netvue.co.uk)

### About Netvue:

Netvue was formed in 2005 specifically to provide new technology IPTV solutions across a range of market sectors. Netvue IPTV systems let you distribute live broadcast TV, together with encoded video channels such as DVD or a video-on-demand file server, all around a building on computer network cabling. There is no need for co-ax cabling and the system has the added benefit that users can watch TV and videos on computers as well as LCD and Plasma display screens.

Netvue is a business division of Projects UK Ltd, based in London, UK
