

Press release:

Netvue extends IPTV distribution to Envy's second site

Netvue has recently worked at Envy, the London UK based High Definition post-production facility, to extend their Netvue IPTV television distribution system to a second site at Margaret Street in London's West End. This allows Envy's Margaret Street site to show live broadcast television and video feeds from the Envy main site at Rathbone Place.

The IPTV channels are continuously streamed from Rathbone Place to Margaret Street across Envy's IT network link. Daniel Sassen, chief engineer at Envy, explained "extending our IPTV system to Margaret Street allowed us to provide TV and video channels without the expense and disruption of installing more roof-top equipment and another headend at the new site".

Netvue IPTV systems offer all the benefits of live broadcast TV on your computer network with a much lower bandwidth requirement than many people realise. Customers can take advantage of scheduled recording and playback of TV on computers, Video on Demand, Digital Signage and more, all with digital picture quality.

About Netvue:

Netvue was formed in 2005 specifically to provide new technology IPTV solutions across a range of market sectors. Netvue IPTV systems distribute live broadcast TV, encoded video channels and Digital Signage, all around a building on the computer network. There is no need for co-ax cabling and the system has the added benefit that users can watch TV and video on computers as well as LCD and Plasma display screens.

Netvue is a business division of Projects UK Ltd, based in London, UK.
